

HARSH DEEP

Queens, NY | (516) 800-0721 | iharshdeep7@gmail.com |

Supply Chain Analyst • Demand Planning • Power BI • Advanced Excel

PROFESSIONAL SUMMARY

Supply chain professional with 6+ years of combined experience in logistics operations and data analytics, uniquely positioned at the intersection of hands-on operational planning and modern BI reporting. Proven ability to analyze supply-demand imbalances, identify shortages, and translate complex data into actionable purchasing and procurement recommendations. Proficient in Advanced Excel (Power Query, dynamic arrays, pivot tables), Power BI, SQL, and Tableau. MS in Business Analytics (GPA 4.0). Track record of building daily, weekly, and monthly operational dashboards and collaborating cross-functionally across operations, finance, and procurement teams.

PROFESSIONAL EXPERIENCE

Sunny Truck Driving School — Business Analyst

Mar 2025 – Present

- Designed and deployed Power BI and Excel dashboards to track operational KPIs across scheduling, capacity, and performance — enabling leadership to make faster, data-driven resource decisions
- Built end-to-end data pipelines using SQL and Excel Power Query — ingesting, cleaning, and transforming large operational datasets into structured, reporting-ready formats
- Identified anomalies, unusual data patterns, and capacity constraints through dataset analysis, surfacing actionable insights and presenting findings to operations leadership
- Collaborated cross-functionally with operations, administration, and finance teams to define KPI frameworks aligned with organizational objectives

Sunny Truck Driving School — Business Analyst Intern

May 2024 – Jul 2024

- Analyzed scheduling patterns and throughput data, producing stakeholder reports that directly informed resource allocation and staffing decisions
- Built Excel dashboards to visualize performance trends across student cohorts and instructor capacity utilization

Cigno Logistics LLP — Team Lead — Supply Chain & Dispatch Operations

Mar 2018 – Jul 2023

- Analyzed daily shipment demand patterns and fleet capacity to balance supply constraints against real-time delivery requirements across multiple routes — identifying shortages and recommending resource reallocation to maintain service levels
- Built and maintained daily, weekly, and monthly Excel-based operational reports tracking capacity utilization, driver KPIs, and delivery performance, distributed to leadership for data-driven decision-making
- Identified unusual data patterns, supply constraints, and recurring bottlenecks through route and performance analysis, escalating procurement needs and recommending substitutions when inventory or capacity was insufficient
- Coordinated cross-functionally with operations, customers, and procurement teams to convert finished-demand requirements into actionable resource and scheduling decisions
- Managed recurring third-party vendor coordination and load assignments, ensuring continuity of supply and zero-gap coverage across peak operational windows
- Trained and mentored junior coordinators on operational systems, data tracking protocols, and performance standards — improving team consistency and reducing onboarding time

EDUCATION

M.S. in Business Analytics — St. John's University, Queens, NY

GPA 4.0 | Dec 2024

B.Tech in Mechanical Engineering — Chandigarh Engineering College, India

GPA 3.68 | May 2018

TECHNICAL SKILLS

Reporting & BI: Excel (Advanced: Power Query, dynamic arrays, pivot tables, Power Pivot), Power BI, Tableau, Visio
Data & Analytics: SQL (intermediate), Python (basic scripting), data cleaning, ETL pipelines, anomaly detection, KPI framework development

Supply Chain: Demand & inventory planning, supply-demand analysis, shortage identification, procurement coordination, SLA management, capacity planning, cross-functional collaboration

Presentation: PowerPoint (advanced), stakeholder reporting, executive dashboards, findings presentation to leadership

PROJECTS & PORTFOLIO

MS Business Analytics Projects: Built multiple analytical dashboards and data projects during graduate studies at St. John's University covering supply chain analytics, demand forecasting, and business intelligence reporting.
